MATERIAL TEST REPORT

Finish Name	**BURNISHED BLACK**
Finish Code	**CS-03**
Material	**STAINLESS STEEL**

Application	**Indoor** ☑	**Covered Outdoor** ☑	**Exposed Outdoor** ☐	**Seaside** ☐

TEST	RANGE	RESULT	METHOD
BOND TEST	2 - 3 N/mm2	2.3	Bond strength is a measure of the adhesive strength of a coating to its substrate by adhering a metal dolly to the surface of the test panel to be tested and pulling the dolly away from the surface, perpendicular to the surface by using a pull off apparatus.
SCRATCH RESISTENCE TEST	1300 g - 1500 g	1700 g	Scratch test is conducted to determine the resistance of the coating to penetration by scratching with a scratch stylus loaded with 1800g of load.
SALT SPRAY TEST	500+	500+	Salt spray testing is an accelerated corrosion test that produces a corrosive attack to coated samples in order to evaluate the suitability of the coating when exposed to salt spray for 500 hours.
WEATHER RESISTENCE TEST	500+	500+	UV Resistance is a accelerated weathering test conducted on coating material to determine its ability to withstand the effect of sun light when exposed to radiation for 500 hours.

Protective Coating Thickness	90+ Microns

Conclusion :

Burnished Black finish on **STAINLESS STEEL** is suitable for **Indoor and Covered Outdoor** usage as it has passed all tests and results are within the permissible range.
